

# AS FOR WILDLIFE...

Among the mammals are Squirrels, Voles and Mice, Moles, Hedgehogs and Bats. Urban Foxes have been spotted occasionally. These are generally found in the areas where there are compost, log piles, and longer grass.

Wrens and Robins are present along with other common garden birds. This year for the first time Kites have nested Tower Hill and until recently, when it fledged and flew the nest, their offspring could be heard calling. The juvenile Red Kite has a shrill call that sounds like a cheap plastic whistle with a faulty pea!

There is also a Green Woodpecker (Yaffle) who can be seen swooping from tree to tree with its undulating flight or sometimes heard giving its distinctive chattering call. Their diet consists almost entirely of ants and there is an abundance of these around.

Insects are everywhere in fact, the flower banks attract bees, moths and butterflies such as the Comma, Painted Lady, and Common Blue. And, of course, we have plenty of spiders and beetles. Love them or hate them, even the bugs all have a vital part to play in the ecology of the Cemetery.

# TOWER HILL CEMETERY

...is a haven for a diverse range of wildlife and wildflowers. It is managed and maintained with this in mind.

Our Grounds Maintenance contractors are 'Hedgehog Heroes' who routinely check for hedgehogs and other mammals before using strimming and mowing machinery. Working in partnership with local organisations we have installed bird and bat boxes in both cemeteries.

- Lawsons Cypress
- \*Horse Chestnut
- Yew
- \*Western Red Cedar
- Strawberry Tree
- Whitebeam
- Hawthorn,
- Norway Maple
- Flowering Cherry
- Hornbeam
- Silver Birch

There is a wildflower board on the path in the older part of the cemetery near the work sheds that will help you tell your Ranunculus Bulbosus from your Primula Veris.

Wildflower banks exist within the older section of the cemetery too and can be identified by the fact that they are less regularly manicured than other areas!

Lichens and mosses grow on the stone wall and other stonework. Some are as old as the gravestones themselves.
